

Who is Clearfly?

Founded in 2008 Clearfly raised a Series A of \$2,500,000 from an investment group (Aventus Group) here in Billings, MT. The network construction began as did the acquisition of customers. In 2012 Clearfly successfully closed a series B round for \$2,500,000 from a large Silicon Valley VC (Clearstone Ventures) as the growth continued. Fast forward, today the company is approaching 5,000 nation-wide business customers. In addition to customer growth the company operates with \$0.00 in debt and has enjoyed positive monthly Net-Incomes since 2014.

It's Clearfly's obsession to deliver quality voice solutions to business customers. In order to reliably provide mission critical products the network infrastructure is the most important element. Clearfly runs an extremely redundant and fault tested data-center and cloud based voice plant. With data-centers built out in Billings, MT – Seattle, WA – Denver, CO – Chicago, IL (Q.4 completion) clients can rest assure that the Clearfly infrastructure is built for the most discriminant and sensitive voice needs. In addition, Clearfly also backs up real-time voice resources to the Metaswitch cloud. The data-center build out provides two-fold benefit to our end-users. One, geographic redundancy for our Metaswitch voice switch eliminates the risk of a outage due to an isolated geographic issue. Two, for a lot of clients who rely on a separate ISP for the Clearfly SIP services peering with these carriers in their data-center POPs is extremely helpful in keeping calls 'on-net'. Since inception Clearfly has never had a switch outage. Sending additional voice resources through the Metaswitch cloud provides a final additional layer of redundancy because we're obsessive like that.
