

More Than Your Data Could Be At Risk

Business Continuity

A recent FEMA report estimates that 40 – 60% of small-to-mid-sized businesses (SMBs) won't survive a data calamity. Yet other priorities and financial constraints often push business continuity to a back burner. But what if there was a comprehensive backup, disaster and recovery solution that's practically maintenance-free and priced to fit small business budgets?

Don't Let a System Failure Shut Down Your Business

Our business continuity solution is designed to quickly revive your network and have your employees productive again in almost no time. It operates automatically to back up your vital data as frequently as every 15 minutes. If there's a problem, files can be restored in about a half-hour, or if needed, our system can take over as a virtual server to resume operations until bigger issues with your network can be resolved. And in a worse-case disaster scenario, remote server backup is also available to keep your files and data safe and secure. [More >>>>](#) [More >>>>](#)

Did You Know?

- Within a 12-month period, the typical SMB will suffer six computer outages.
- The median cost of downtime for an SMB is \$12,500 per day after a data-loss disaster.
- Only 23% of businesses backup daily, and among those with disaster preparedness plans, 50% only implemented a plan following a network outage or data loss.
- If a small business can't resume operations within 10 days following a natural disaster, it probably won't survive.

The Business Solution for Organizations that Can't Afford Downtime

A catastrophic system failure creates chaos. Gone are billing and inventory records, customer lists ... miscellaneous reports. To recreate this information from scratch is expensive and time consuming. And depending on how much damage was done to the computer systems, it could be days, weeks or even months before operations return to normal. Be secure! Our business continuity solution:

Backs Up Data Every 15 Minutes, Every Day

Not even the most conscientious users save their work as consistently and thoroughly as our business continuity solution.

Gets You Back to Business — Fast!

Servers crash, networks fail ... it's going to happen. But with our virtual server engaged and deployed, we'll have your systems up and running again in mere minutes.

Complies with Laws and Government Regulations

Violating government rules for protecting sensitive records at the federal level (such as HIPAA or Sarbanes-Oxley) as well as state or local jurisdictions can bring severe consequences. Our business continuity solution goes a long way toward helping you maintain compliance.

Recovers Vital Email

Everyone's done it — deleted or lost an email containing critical information. Take advantage of our email recovery feature for Microsoft Exchange Servers and recover that important message from days or even months ago.

Provides Remote Monitoring and Management (RMM)

It's true; an ounce of prevention is worth a pound of cure. RMM service is included with our business continuity solution so small issues don't become big problems.

Keeps Data Safe When Major Disaster Strikes

Fire, flood, earthquake ... devastating damage to your physical location is always possible. But if the worst happens, our remote SAS70 Type II and HIPAA-compliant data centers will have your data and records safely housed so you can resume operations.

Let us answer any questions you have about our turn-key business continuity solution. You'll discover the easiest and most affordable way to keep your organization in business.

Compare Business Continuity Solutions Before Choosing

There are other solutions on the market, so be sure to ask:

- *Can backed-up data be restored to different kinds of hardware?*
- *Can both recent and older archived data be restored?*
- *Are ongoing data backup processes monitored so failures can be diagnosed and remedied before major problems arise?*
- *Is data automatically backed up both onsite and offsite?*

Your Full-Service IT Provider

Our managed IT services cover a full spectrum of technology solutions, including remote monitoring and management of your networks, 24/7 service desk support for users, and business continuity solutions to ensure your company is prepared for any possible disruption.
